## Wide therapy

Management updates

### MassChallenge Roadshow

Our trip to the United States gave us a first taste of the American market in three main areas: treatment centers, potential clinical trial partners and investors. We made important and valuable connections to be realized in the coming months.

### Health IL event

At Health IL, we had the honor to manage a round table together with our partners, ALYN hospital. The discussion at our table focused on building partnerships between health organizations and startups, as well as identifying gaps and bridging them. In addition, a meeting with investors was also featured at this event, resulting in new connections that may prove fruitful in the future.

### In the kindergartens

Perach Israel operates dozens of special education facilities across Israel for children of all ages, with a wide range and level of special needs. Our partnership with Perach at their kindergarten for children with Autism gives them Wide Therapy to help their students and children break down barriers.

We appreciate our continuing partnership.

## In ALYN hospital

ALYN also conducts webinars that focus on the implementation of innovation in healthcare organizations. In this webinar, Wide presented the exciting results of our pilot with ALYN, achieving significant success in helping children walk and learn other crucial daily skills.

During Hanukkah we had the privilege of being part of a unique science event held at ALYN. It was an opportunity for children and families to come to a hospital and enjoy themselves, to feel comfortable and interested, and to come closer together. For us, it was heartwarming to be part of such a meaningful effort to help children while remembering the most significant thing, they are children. We also presented Wide to visitors at the event. The feedback and interest we received were very positive, and will lead to new opportunities

## Our Technology

A beta version of our software will soon be distributed. We have formed partnerships with special needs organizations that will be using our Beta version, helping thousands of special needs children.
